RareBooksClub. Paperback. Book Condition: New. Paperback. 92 pages. OCLC Number: 52112968 Excerpt: . . . The wicking pore throat structure provides a flow path for the separated liquid phase. Two mechanisms are required for the device to operate effectively, a wicking mechanism and a mechanism for excluding gas. The wicking mechanism is accomplished by a porous structure that is wetting for the liquid in order to cause preferential sorption, while having high permeability to provide flow capacity to the outlet. The second mechanism is also required to prevent intrusion by the gas stream into the liquid outlet channel, and is accomplished using a pore throat. The bubble point of the pore throat, as dictated by the maximum pore size, contact angle, and surface tension of the liquid, determines the maximum allowable pressure differential between the gas and liquid outlets. The wick and the pore throat can be embodied in the same component or structure. The purpose of the testing reported here is to determine the performance characteristics of the architecture, to identify key principles and parameters, and to develop scaling relationships. The processing capacity of the device is constrained by a number of parameters, some of which are explored by...
